3. Verify that if Door is made of glass, it does not break easily
4. Verify that Door size like length, Height and Breath (Thickness of door) is according to the door frame.
5. Verify that the Door is waterproof and Heatproof.
6. Verify that the Door has handles or not.
7. Verify that the Door handles is made up of which built quality.
8. Verify that the Door hinges is well and proper
9. Verify that the Door hinge is rust free or not.
10. Verify that the Door has automatic closing mechanism or not.
11. Verify that the Door has lock system to lock the doors
12. Verify that the Door has an automatic open system.
13. Verify that the Door has automatic lock system or not.
14. Verify that the Door has Digital lock or manual lock system.
15. Verify that the Door has a Door shutter or not.
16. Verify that the Door is making noise on opening and closing.
17. Verify that the Door has a Top shutter or not to close the door.
18. Verify that the Door can remain open if required.

Write a Scenario of ATM

1. Verify the types of ATM Machine, if it has a touch screen, both keypad button only, or both.
2. Verify that the touch of the ATM screen is smooth and operational.
3. Verify that the labels and controls including text box, buttons, images, and links are present on the screen.
4. Verify and Check that on properly inserting a card of different bank is properly showing.
5. Verify and Check that ATM Machine support all transaction of payment network and card issuer company like MasterCard, Visa, American Express, etc.
6. Verify that ATM screen is properly visible or not.
7. Verify that ATM Card is Excepted by ATM Machine or not.
8. Verify that ATM Machine Key PIN no Keypad number is properly working or not.
9. Verify that ATM Machine can identify ATM Card owner or not.
10. Verify that ATM Machine Screen shows account detail properly or not.
11. Verify that ATM no/PIN no can enter properly or not.
12. Verify that if ATM no/PIN no is wrong it shows person has entered wrong ATM no on screen.
13. Verify and Check that Withdraw option is Properly working or not.
14. Verify and Check withdraw 1000 option, 5000 option and 10000 option is properly working or not.

15. Verify and Check that the correct amount of money gets withdrawn as entered by the Person for cash withdrawal.
16. Verify that ATM Machine has withdrawal limitation.
17. Verify and check it shows account balance before withdrawing and after withdrawing or not.
18. Verify that person can check saving account detail option properly working or not.
19. Verify and Check that deposit option is Properly working or not.
20. Verify and Check that ATM Machine has deposit limitation or not
21. Verify and Check that ATM Machine check that note deposited is real or not.
22. Verify and Check that ATM Machine counts the note properly or not
23. Verify and Check that ATM Machine can understand note which amount of note is deposited.
24. Verify and Check that ATM Machine shows on screen that user cannot withdraw cash because of ATM has no cash.
25. Verify that the user's session timeout is maintained.

Write a scenario of Microwave Owen

- Verify that the user can check Which company model.
- Verify that the user can check the old model or new model.
- Verify that the user can check machine body type.
- Verify that which Material is used in this machine.
- Verify that all functions properly working or not.
- Verify that the oven heats the food at the desired temperature properly.
- Verify that the oven heats food at the desired temperature within a specified time duration.
- Verify the ovens functioning with the maximum attainable temperature.
- Verify the ovens functioning with minimum attainable temperature.
- Verify that the oven's plate rotation speed is optimal and not too high to spill the food kept over it.
- Verify that the power cord of the oven is long enough.
- Verify that the usage instruction or user manuals have clear instructions.
- Verify that the temperature regulator is smooth to operate.
- Verify that the temperature regulator works correctly.
- Check the oven's functionality with different kinds of food like solid and liquid.
- Verify that the oven's door gets closed properly.
- Verify that the oven's door opens smoothly or not.
- Verify that the next written over the oven's body is clearly readable

Write a scenario of Coffee vending Machine

- Verify that the user can check the outer body.
- Verify that the user can check the inner body.
- Verify that machine color and as per the brand is clearly visible.
- Verify that Switch on/off button properly visible or not.
- Verify that there is a description book with machine or not.
- Verify that machine material like metal, steel, etc.
- Verify that machine is with wire or wireless.
- Verify that the user can set the temperature in the machine.
- Verify that the Steam hot water button.
- Verify that the machine has a grinder coffee beans feature or not.
- Verify that user can check Steam wand feature or not.
- Verify that the user can check if the automatic machine is properly working or not.
- Verify and check that the user can check all buttons.
- Verify and check how many years the warranty is.
- Verify and check that the machine has a Mixing chamber feature or not.
- Verify that user can check drink option.
- Verify that the user can check magnetic sealing door properly open or not.
- Verify that the user can check water quantity.
- Check that auto clean function is available or not.
- Verify and Check if the machine is reusable filter or not.
- Verify that user can check battery properly work or not.

Write a Scenario of Wristwatch

- Verify and check which system of watch it is like Digital or analog.
- Verify and check that wristwatch is of which gender to wear.
- Verify that what is the type of watch is like Formal wristwatch, Casual Wristwatch, Sports Wristwatch, etc.
- Verify what the color of the wristwatch is.
- Verify and check description that how many months does not need to change the cell of watch.
- Verify that the wristwatch is waterproof or not.
- Verify that if wristwatch is not waterproof then it is water resistant or not.
- Verify that wristwatch is sturdy or not.
- Verify that wristwatch dice glass is of good quality.
- Verify that wristwatch dice glass does not get scratched easily by dust.
- Verify that how much pressure does wristwatch need to break glass of the watch
- Verify that if wristwatch dice glass break, then glass crume does not affect watch mechanism.
- Verify that wristwatch belt is of leather, rubber, chain, etc.
- Verify that wristwatch can change time efficiently.

Write a scenario of Lift (Elevator)

- Verify the height, width, and length of lift.
- Verify that the maximum passenger capacity of lift.
- Verify that the maximum weight capacity of lift.
- Verify that the type of door of lift.
- Verify that the door should not be opened if open is door button is pressed in between two floors.
- Verify that the type of material used in the lift interior.
- Verify that the buttons are present according to the number of floors in the building.
- Verify that the controls are guided by a voice message.
- Verify that fan is present in lift or not.
- Verify that emergency button and contact details should be present in lift.
- Verify that the buttons to open and close lift door should be present.
- Verify that light is present in lift or not.
- Verify that the time for which the door remains open on the floor.
- Verify that performance of lift, the time taken to go a particular floor.
- Verify that the buttons should be self-explanatory.
- Verify that lift moves to particular floor when the floor button is pressed.
- Verify that door should not open while the lift is in motion.
- Verify that inside lift user is promoted with current floor and direction information the lift is moving towards.

- Verify that lift comes to floor is up/down are pressed at a particular floor.
- Verify that in case multiple floor number button is clicked, lift should stop at each floor.
- Verify that behavior of lift in case of power failure, lift should not free fall or should not stop in between two floors.
- Verify the behavior by pressing the open button while the lift is moving.
- Verify that the behavior by pressing the stop button before reaching the specific floor.
- Verify that backup mechanism should be present in case of power loss.

Write a scenario of WhatsApp Group (generate group)

- Verify that user is able to create a new group or not.
- Verify that user able to add multiple contacts from contact list.
- Verify user is able to delete a group.
- Verify that user is able to insert group name and select image for WhatsApp group DP.
- Verify that user can able to add and remove contacts from group.
- Verify that user can send and receive text messages in group.
- Verify that user can send and receive photos in group chat box.
- Verify that user can send and receive documents in group chat box.
- Verify that user can send and receive videos in group chat box.
- Verify that user can send and receive audio in group chat box.
- Verify that user can send and receive emotions icons in group chat box.
- Verify that user can send and receive contacts in group chat box.
- Verify that user can send and receive location in group chat box.

- Verify that user can check send and receive GIF in group chat box.
- Verify that user can check send and receive stickers in group chat box.
- Verify that user is able to mute the group or not in group chat box.
- Verify that user is able to search specific chat history using search option available in group chat box.
- Verify that user can delete text, video, audio, locations, documents in group chat box.
- Verify that user can check send recorded voice in group chat box.
- Verify that user is able to make multiple video call in group chat.
- Verify that user can able to shared images, links, and documents from group media in group chat.

Write a scenario of WhatsApp Payment

- Verify that user can register for WhatsApp payment.
- Verify that user can receiving money from another person.
- Verify that user's phone number of WhatsApp payment.
- Verify that users can review the transaction details before confirming.
- Verify that users receive a notification when they have received money.
- Verify that users can link their bank account to WhatsApp for transaction.
- Verify that sending money from one user to another within the WhatsApp application.
- Verify that transaction history includes details such as amount, sender, receiver, date, time and transaction status like completed, pending, etc.
- Verify that users can select a contact from their address book to send money to.
- Verify that user can view their transaction history.
- Verify that user can enter the amount they wish to send and add a note if necessary.
- Verify that user can receive confirmation messages for each transaction, including details about amount sent.
- Verify that user can review the transaction details before confirming.
- Verify that user can check security features such as PIN or biometric authentication before making a payment.

- Verify that user can check transaction details are visible within the chat interface.
- Verify that user can check edit or remove bank accounts as needed.
- Verify that user can check adding a bank account for transaction.
- Verify that user can check add multiple bank account if supported.
- Verify that transactions are processed reliably without delays or errors.
- Verify that there are limits on the amount of money that can be sent or received per transaction and per day.

Write a scenario of GMAIL (Positive/Negative)

- Check if the compose button is available and clickable.
- Ensure users can create and send a new email successfully.
- Verify that user can check a new received email is display as highlighted in the inbox section.
- Verify that user can check a new received email message has correctly display sender email name, mail subject.
- Confirm that users can add multiple recipients to an email.
- Verify that user can check receives the email in their inbox.
- Verify that user can check click to new received email and user is navigated to email content.
- Verify that starred or flagged emails are visually marked in the inbox.

- Verify that the user can check all the emails marked as read are not highlighted.
- Verify that the user can check the email contents are correctly displayed with the source format.
- Verify that any attachments are attached to the email and are download.
- Verify that count of unread emails is displayed along side 'inbox' text in the left sidebar of Gmail.
- Verify the functionality of the Primary, Social, Promotions and other categorized tabs.
- Confirm that the inbox supports a conversation view for email threads.
- To check if the user can delete the email from the inbox, which is then moved to the spam folder.
